

DISPLAY METHOD AND APPARATUS FOR FACILITATING
INTERACTION WITH WEB SITES

Abstract of the Invention

The invention is a computer-implemented method and
5 apparatus for organizing Web pages and other computer files
relative to each other in a manner analogous to a three or
four dimensional spatial relationship and displaying multiple
Web pages simultaneously in multiple panels of a computer
monitor in accordance with said spatial organization, whereby
10 despite the organization, at least one of the Web pages or
files can be made to stay in the same panel of the display
while the user navigates through the virtual multidimensional
space.
